Business Case for
Natural Refrigerants

25-27/09/17-Berlin

THANK YOU FOR SHARING OUR MISSION:

A **GREEN** FUTURE FOR THE REFRIGERATION WORLD

ATMOSphere Europe 2017, the event entirely dedicated to **natural refrigerants** held in Berlin, has just been concluded. We have come to the moment where a drastic position has to be taken to **reduce CO₂ emissions**: the future of our planet depends on our choices.

With the aim of reducing carbon dioxide emissions, from more than 10 years **Euroklimat** has decided to invest in **propane**, a natural refrigerant that does not harm the environment or man.

During the three days of conferences held in the German capital, we were able to confront these issues with the main stakeholders of refrigeration, government agencies and representatives of the European Commission.

On this occasion, our product specialist Eng. G. Fava had the opportunity to present an interesting case study concerning the installation of a **chiller with R290** for the Air Conditioning of a cash and carry store located in Padua (IT).

You can find our presentation by clicking [here](#).

We are proud of the enthusiasm demonstrated that drives us to work further to offer more and more innovative solutions to ensure efficiency, security and sustainability.

Thanks also to our partner **Shecco** who from many years believes in **natural refrigerants**.

For further information and/or technical details, don't hesitate to contact us at info@euroklimat.it
