

Rental air conditioning solution for the food industry

One of the most famous producers of biscuits in France has contacted [Andrews Sykes Climat Location](#) depot in Paris looking for a powerful and effective climate control solution on hire.

Because of the high temperatures, the plant was having problems with the preparation and conservation processes of its chocolate-covered biscuits.

A specialist conducted a free site survey to ascertain the exact requirements for this job, deciding to hire **two HPAC90 high-performance air conditioners**. The units were placed outside, and flexible ducting was then used to convey the cold air on the production and storage lines.

The client was extremely impressed with the air conditioning equipment recommended.

All HPAC units use air recirculation techniques that help to conserve energy by reusing returned air instead of outside, this has brought the temperature to the ideal level in just a few minutes, allowing not to interrupt production.
