
Euroklimat at ATMOSphere 19 - 21 November, Riva del Garda.

THANK YOU FOR SHARING OUR MISSION:

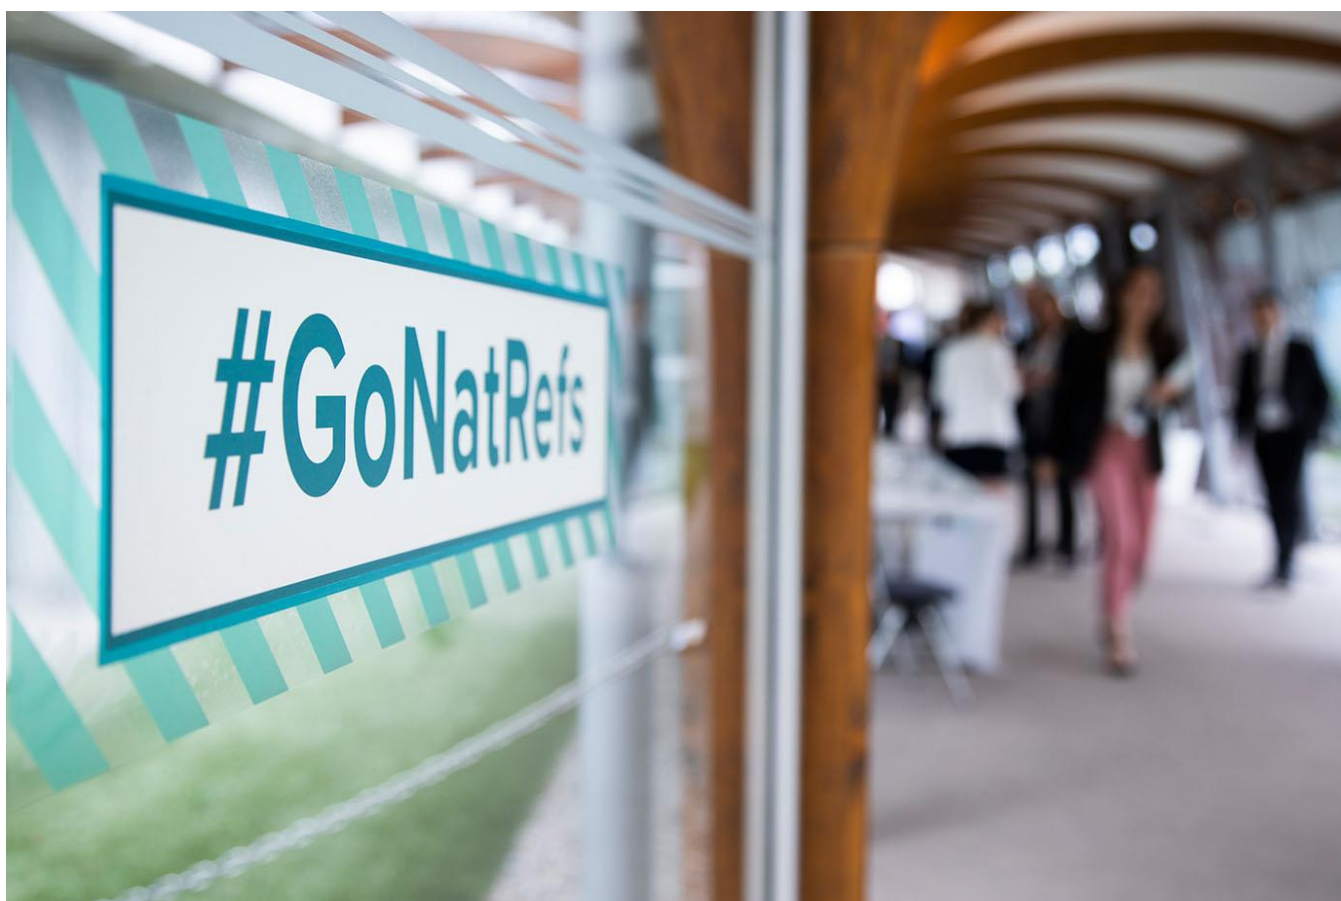

A **GREEN** FUTURE FOR THE REFRIGERATION WORLD

Last month ended **ATMOSphere Europe 2018**, the event entirely dedicated to **natural refrigerants** held in Riva del Garda. On a global level, we increasingly feel the need to undertake a drastic decision to **reduce CO2 emissions**: only in this way can we guarantee a **Green** future to our planet. With the aim of reducing carbon dioxide emissions, from 12 years **Euroklimat** has decided to invest in **propane**, a natural refrigerant that does not harm the environment or man.

During the three days of conferences held in the German capital, we were able to confront these issues with the main stakeholders of refrigeration, government agencies and representatives of the European Commission. Our product specialist, Ms. Giulia Fava, also presented an interesting case study concerning the installation of an R290 chiller for a very special application: the alternative production of low-temperature (-32°C) and positive temperature (+5°C) glycol water. The chiller was installed in Sicily, by Simonegatto company, and performs a double function in the industrial process: reaching extremely low temperatures for essential oils' extraction from citrus fruits and maintaining controlled temperature for the conservation of the semi-finished product.

You can find our presentation by clicking [here](#).

We are proud of the enthusiasm demonstrated that drives us to work further to offer more and more innovative solutions to ensure **efficiency, security and sustainability**.

A big thank you to our partner **Shecco** for the professionalism and efficiency shown in the organization of the event.
